

At The Kinderplatz of Fine Arts we have been teaching children through multiple intelligences for thirty years. While we strive to teach the whole child and provide a variety of rich opportunities that

stimulate growth in every area we also know that each individual has interests that really ignite a spark. If we can reframe information and present it through the areas he or she is most passionate about then learning becomes exciting. Identifying children's intelligences creates open windows of opportunity.

This information is not meant to label your child or put them into a mold. We are not encouraging you to teach children only in their strongest intelligences. This information it is meant to help clarify the uniqueness of every individual and the way he or she learns. It is general information to give you an idea of the areas you see your child drawn to naturally and to inspire you to create new ways of presenting information in a manner that makes learning exciting through different intelligences.

For Additional Information

Our school has many books written by experts in the field of child development. They are available for you to check out any time. We also have a file full of articles helpful to the issues of parenting.
